Withstand harsh weather condition

Highly durable

### WHY STONE CLADDING TILES?

Each stone tile is unique, with the colour and imperfections varying from tile to tile but adding to its beauty.

Natural stone is a very durable material which is more resistant to chipping and breaking.

Stone tile cladding is the diversity of stone available. This means that you can pick a finish and style to suit the look you're trying to achieve.

Stone tile Cladding is a non-porous and non-absorbent material. It does not absorb as any moisture and protects the internal wall from water absorption.

It helps in sound insulation by acting as a barrier between the external sounds and the sounds of the interiors.

### APPLICATIONS

Interiors, Exterior Elevation, Bathrooms, Living Rooms, Wall Tiles Designs, Wall Tiles, Tile for Walls, Stone Tiles.

### WHY ROOF TILES ?

Roof tiles are designed mainly to keep out rain, and are traditionally made from locally available materials such as terracotta or slate and cement.

Modern materials such as concrete and plastic are also used and some clay tiles have a waterproof glaze.

Lifespan of over 50 years.

Clay roof tiles are a natural and beautiful material with UV-resistant and durable colours.

Exclusive range of clay roof tiles in different colours, finishes (natural, glazed and engobe) and fittings to create the perfect roof.

Clay roof tiles are pure natural products that satisfy all requirements on environmentally friendly construction.

No need for maintenance.
